

Case Design

There are lots of different ways that you can construct a case for this project but a very simple and effective way is to make an MDF box.

Below is an example,

For your case designs you should design 3 different designs using A4 plain paper. On each piece of paper produce a quality design showing all relevant details. Add labels where necessary e.g. show the location of your LEDs etc, also evaluate each design against your specification and state what is good and bad about the design and why you think it is a good design and why it would appeal to the user.

Select a final design that you will build into your final product, state your reasons for the choice you have made. Your final design must be a high quality working drawing, i.e. it must contain enough information to allow a 3rd party to manufacture it.

Extension task: draw your final design in 3D
